

Vitamin C mesotherapy versus topical application for gingival hyperpigmentation: a clinical and histopathological study

Amira Mohsen Abdelkader ,Mohamed El-Mofty, Sarah Elkot, Dalia Yossri, Ola Mohammed Ezzatt

Abstract

Vitamin C/Ascorbic acid inhibits tyrosinase enzyme causing melanin biosynthesis suppression. This study aimed to compare the efficacy of intra-mucosal injection (mesotherapy) with topical gel as non-surgical methods for managing gingival hyperpigmentation.
